

Rear wheel mounting plate

**EASIER TO
ACCESS.
EASIER TO
ADJUST.**

**THERE'S NEVER BEEN A
REAR-WHEEL MOUNTING PLATE LIKE IT.**

Too many users are forced to contort themselves simply to reach for and adjust their chair's center of gravity. This inconvenience means it's often easier to "live with" an underperforming chair rather than make the much-needed adjustment.

Contrast this with the new Motion Composites Real Wheel Mounting Plate. Because we've designed it so it's easier to access from a sitting position, it's also easier to fine tune. Result: your center of gravity is always optimized exactly as you like it. Your chair performs better, and you expend less energy.

But our new Rear Wheel Mounting Plate is not just smarter and more convenient. It's also more resilient. We've beefed up its construction and threads to resist wear and tear. So no matter how often you use it, it'll provide years of dependable functionality and performance.

- **Simpler installation**
- **Easy to access from sitting position**
- **Fine center-of-gravity adjustment**
- **Redesigned and reinforced for more durability**
