

FROM SETUP TO SUCCESS:

PRACTICAL TRAINING FOR BETTER SEATING & MOBILITY OUTCOMES

These practical, informative sessions, are designed to support clinicians and suppliers with actionable, real-world skills. Choose a single course or mix and match to build the training experience you need. Each session delivers clear takeaways you can apply right away, whether you're just beginning your seating and mobility journey or are an experienced professional looking for a fresh perspective and useful new tips.

FALLS PREVENTION BY DESIGN: OPTIMIZING SETUP AND EQUIPMENT IN LONG TERM CARE

Learn how optimal wheelchair setup and product selection can significantly reduce fall risk and enhance independence for manual wheelchair users in long-term care. This session explores positioning strategies, equipment choices, and practical adjustments that keep residents safe, comfortable, and confident in daily mobility.

HELIO MATCHMAKER: PICKING THE PERFECT MODEL FOR EVERY CLIENT

Not all ultralight wheelchairs are created equal. Learn how to choose the best Helio model for each client's unique positioning, performance, and daily function needs. We'll explore how design differences translate to real-world independence helping clinicians prescribe with confidence.

BECOME THE APEX PRESCRIBER: MASTERING THE APEX WHEELCHAIR

Designed for those who want to deepen their expertise, this session explores the Apex's unique design features, configuration options, and clinical benefits. Learn how to tailor the Apex to optimize performance, positioning, and independence so every client experiences ultralight mobility at its best.

FINDING THE FIT: HOW TO PICK YOUR NXT BACK SUPPORT & SEAT CUSHION

Choosing the right back support and seat cushion is key to achieving optimal positioning, comfort, and function. This session walks clinicians through the NXT seating line to understand design features, clinical applications, and how to match each product to a client's postural and mobility needs for long-term success and satisfaction.

WHEELS THAT WORK: OPTIMIZING SETUP FOR MOBILITY AND INDEPENDENCE

Discover how wheel, tire, and hand rim choices influence propulsion, clinical outcomes and daily mobility. This session shows how smart setup can maximize independence, whether working within funding parameters or beyond.

PROPEL WITH PURPOSE: TEACHING ARM, FOOT & HEMI TECHNIQUES

A practical, skills-focused session designed to help clinicians confidently teach real-world propulsion techniques. Participants will learn how to break down arm, foot, and hemi-propulsion to coach users through common challenges, and apply simple strategies that reduce strain and boost efficiency.

LITTLE BODIES, BIG IMPACT: OPTIMIZING PEDIATRIC PRESCRIPTIONS WITH MOTION COMPOSITES

This session focuses on how to ideally configure a Motion Composites wheelchair for growing kids who have unique mobility needs. We'll walk through key adjustments, components, positioning strategies, and practical tips that help clinicians dial in the perfect fit for function and participation.
